

COD Set-Ups COD VARIO

Determination of the chemical oxygen demand index (ST-COD) Small-scale sealed-tube | Total range 0 - 15000 mg/l | (ISO 15705:2002)

COD Set-Up AL200 COD VARIO

Waste water parameter COD

The chemical oxygen demand, ST-COD value, of water as determined by this dichromate method can be considered as an estimate of the theoretical oxygen demand, i.e. the amount of oxygen consumed in total chemical oxidation of the organic constituents present in the water.

COD VARIO Photometer

With four measuring ranges from 3 to 15,000 mg/l O₂, the AQUALYTIC® photometer are suitable for waste water testing.

Two LED light sources with long-term stability ($\lambda_1 = 610 \text{ nm}$; $\lambda_2 = 430 \text{ nm}$, according to ISO 15705:2002), a waterproof sample chamber, a large digital display, and the user-friendly keypad ensure maximum operating reliability and convenience.

Set-Ups COD VARIO

The AQUALYTIC® COD VARIO test set-ups allow highly sensitive and precise water testing with minimum effort. They measure the ST-COD concentration by photometric detection employing a linear relationship between absorbance and concentration.

After adding the sample to a AQUALYTIC® COD VARIO tube test (LR, MR according to ISO 15705:2002), it is heated in the reactor and then analysed in a COD VARIO photometer.

The COD-Set-ups comprise a COD VARIO photometer, 25 tube tests for each of the two lower measuring ranges, a reactor for sample digestion and a cuvette stand.
